

Exercise #9 – Histograms in R

1. Open your R script and add a new section for this exercise
2. Without attaching the Rosmap dataset, do the following:
 - a. Make a histogram of the variable age of death
 - b. Change the title and x axis label of the histogram to something meaningful
3. For those feeling adventurous (hint: the R help function or google will be useful here):
 - a. Add color to your histogram
 - b. Change the width of the bars
