

Exercise #8 – Installing r Packages

1. Open your R script and add a new section for this exercise
2. **Note:** You need to be connected to a stable internet connection to install a package, but not to load a package. Once you install a package successfully you should not need to install it again unless you update your version of R.
3. Install the R package “epitools”
4. Load the package “epitools”
5. Install the R package “tidyverse” [**tidyverse contains many popular packages in R. By loading tidyverse you are also loading many other useful packages]
6. Load the package “tidyverse”
