Exercise #10 – Numerical and graphical summaries

1. Open your R script and add a new section for this exercise

2. <u>Without</u> attaching the Rosmap dataset, do the following:
    a. Create a table of the msex variable to determine how many males and females are in the dataset
    b. Determine the mean, median, standard deviation, min, and max years of education. **<u>Hint,</u>** look at the help files to learn how to calculate these with missing data

Congratulations! You have now completed the R pre course. Please save your R script with <u>all</u> of the ten exercises and email to XX for review.
